

## Converso® Live

The Italian Simultaneous Interpreting Delivery Platform  
for professional online events

[www.converso.live](http://www.converso.live)

## Integrated video conferencing and interpreting platform

Give your multilingual audience the chance of listening to their own languages.

Interpreters work from virtual booths and consoles behind the scenes. We kept as much of the old on-site settings as we possibly could, to give the interpreters the comfort they need to perform at their best.

Converso® Live is a professional platform providing all the key solutions in a simple online environment. You can activate almost all the functions with one click.

We never compromise on privacy and security thanks to our IT team. For example, you can enter the meeting only through a direct and personal

invitation link.

Interpreters work from a virtual console with buttons and sliders rather than menus and submenus. We have come up with a smooth handover feature between booth mates; a parallel, closed-circuit system allows the interpreters to see and talk to each other, as well as share a notepad and a timer. The streamlined handover system is carried out manually without any complicated steps.

## On-demand interpreting for third-party services

Add simultaneous interpreting to any kind of online events: webinar, e-learning, virtual show, and streaming, and reach a broader multilingual audience.

Or integrate remote interpreters into your control room supporting foreign speakers or moderating multilingual panels.

Converso® Live replaces booths, consoles, and any other hardware in any location or in your studio.

Converso® Live runs in the background or alongside the main event without affecting the event organization or the audience experience.
