

Terpcast App

Seeing opportunities where others see obstacles. Right at the beginning of the pandemic, in March 2020, we developed Terpcast, keeping the interpreters going and adapting faster to the new times by giving them the tools to perform at their best and transition from in-presence conference interpreting to RSI. It was an emergency solution for interpreters, so we chose the camouflage wallpaper.

TerpCast app and TerpTool for interpreters

With the Converso® TerpCast app, a smartphone/tablet and a microphone, you can broadcast directly to the audience connected from the app or to a technician connected remotely, wherever you are and in any circumstance. TerpTools is a web app with booth-mate functions and a streamlined handover system. It has a video chat to maintain eye contact with your booth mate, a shared digital notepad where you can type, write, and sketch, and also a shared timer. It can be used with TerpCast or on its own to provide simultaneous translation on any non-professional, integrated platform.
